Oluwadamilare Oyelakin

Software Engineer

👤 Profile

I am a Software engineer with passion for building scalable web applications, and working with the data flow in those applications.

I love the thrill of solving problems and overcoming challenges.

💼 Employment History

Software Engineer at FindthePro, Ibadan

July 2018

-Programmed well-designed, testable and efficient code to solve business problems

- Responsible for designing and development of applications according to design specifications.

- Documenting and maintaining software functionalities

- Developed applications with team in an agile environment

- Optimized database query run time by caching and indexing data using elasticsearch

-Implemented queuing services like beanstalkd with supervisord to handle large asynchronous processes on the application

- I use continuous integration, deployment and monitoring tools like

Travis ci, bitbucket pipeline, docker and new relic.

Freelance Web Developer at AFRILAB MEDICAL DIAGNOSTICS, Ibadan

-I developed a web-based application that allowed the laboratory users book for lab appointments online.

-The application also helps in tracking all transactions carried out by the laboratory
